Heaven Juice e-liquid is a clear, colourless solution containing USP-Nicotine at 18, 24 or 36 milligrams per millilitre, depending on the strength chosen. The bottle will clearly identify the Nicotine strength of the e-liquid on the label. Your e-liquid also contains Glycerin USP, Propylene glycol USP, and Purified Water (by Reverse Osmosis). Nicotine belongs to a group of chemicals called alkaloids. It is a very toxic, highly addictive poison which is lethal in acute doses above 60mg for an adult; and at significantly lower levels for children. Nicotine is the primary chemical in cigarettes which keeps people addicted to them.
